Playing it Safe in Salina

Cameron's Salina, Kansas Turbine Specialties (TSI®) facility, a market leader in the manufacturing and repair of large bore turbochargers, was recently presented the "K-Safe" Award from the State of Kansas for completing more than 500,000 work hours without a lost time recordable injury. To date, our Salina facility has gone more than 1,246 days without an OSHA recordable incident and more than 1,372 days since an OSHA lost-time injury. Currently, this facility has more than 704,000 hours towards the next milestone of the 1,000,000 hour mark. The last recordable incident was November 17, 2005 and the last incident that resulted in days away from work was July 14, 2005.

TSI Turbocharger

The "K-Safe" Award, which is sponsored by the Kansas Department of Labor, was introduced in 2006. This cachet program recognizes employers from a wide array of business markets across the state and is dedicated to providing safe work environments for their employees. The mission of this program is to encourage Kansas employers to develop and implement safe work environments that will, in turn, reduce the number of employee injuries.
